Ryabinina Raisa
Frontend Engineer

About me

I'm a young person who will be graduated from a top math-physics university in Russia this summer. But it's just a necessity. I have been working during a year in a small IT company where I've learned how to solve business problems of different nature with the help of sequential construction of scalable architecture, good code, and communication. Besides, I'm interested in creating accurate, convenient, catchy interfaces and enthusiastic about improvement business value of the product.

Experience

July 2018 - present, Multipass Limited
Junior Frontend Engineer

I've built client and back-office web-applications to simplify the use of urban services. I've worked with Angular 7, reactive state management library and created an adaptive layout with flexbox. I've learned about SPA and REST API architecture principles, best practices for interacting with an interface and problems decomposition.

July 2017 - August 2017
Freelance

Implemented chat bot features with Facebook API

August 2016 - June 2017, Joint Educational and Scientific Center Parallels-MIPT, Moscow
Software Engineer Intern

Learned about the software development process.
Developed a tool for analysis of testing data with Python and Flask.
